

Alan Regaya

Senior Full-Stack Developer

nalayager@gmail.com | github.com/lanz-2024 | linkedin.com/in/alan-r-8363b8144 | Quezon City, Philippines | Available 9AM–5PM EST

PROFESSIONAL SUMMARY

Senior Full Stack Developer with 8+ years of experience (3+ years senior) specializing in headless WooCommerce/CMS architecture, modern JavaScript frameworks, and enterprise e-commerce. Led 30+ successful WooCommerce site builds and migrations across AU, UK, and US markets. Creator and maintainer of an open-source headless WooCommerce library (90+ GitHub stars, 37 forks, 30+ production deployments) across 45 repositories. Expert in AI-assisted development workflows with 48+ custom Claude Code skills and 8+ MCP integrations, enabling 60% faster delivery cycles and comprehensive technical documentation.

TECHNICAL SKILLS

FRONTEND

Next.js, React.js, TypeScript
JavaScript, Tailwind CSS
HTML5, CSS3

ACCESSIBILITY

WCAG AA compliance
axe-core, Lighthouse audits
Keyboard navigation, ARIA labels

CMS PLATFORMS

Craft CMS, WordPress
WooCommerce
Payload CMS (TypeScript-native headless)

DEVOPS

Git, GitHub Actions CI/CD
Vercel, AWS, Docker
WP-CLI

BACKEND

Node.js, PHP
RESTful APIs
JWT / OAuth

AI DEVELOPMENT TOOLS

Claude Code (48 custom skills)
MCP: GitHub, Figma, Playwright
ClickUp, Bitwarden integrations

SEARCH & ANALYTICS

Algolia (indexing, InstantSearch)
GTM (data layer events)
Google Analytics 4, Marketo

PROFESSIONAL EXPERIENCE

Senior Full-Stack Developer

Feb 2023 – Present

[Blaze Commerce](#)

Headless CMS Migration Leadership

- Led 30+ successful migrations from traditional PHP CMS platforms (Craft CMS, WordPress) to headless TypeScript-native architectures, including complete content model mapping, API adapter development, and zero-downtime deployment strategies
- Architected Craft CMS → headless migration framework: mapped sections/entries to REST API collections, converted Matrix fields to flexible content blocks, implemented fallback routing for SEO continuity, and orchestrated phased asset migration with CDN optimization
- Maintained 100% content parity during migrations using automated validation scripts and client-side preview environments before production cutover

Full Stack Development

- Built production-ready headless WooCommerce → Next.js architecture; open-sourced core library achieving 90+ GitHub stars, 37 forks, and deployment across 30+ live client storefronts (AU, UK, US) with 66 theme releases under semantic versioning
- Developed TypeScript-first component libraries with Tailwind CSS, implementing atomic design principles and Storybook documentation for design system consistency
- Integrated Algolia search across multiple client sites: designed index schemas, implemented automated re-indexing workflows triggered by content updates, and built InstantSearch UI components with faceted filtering

Analytics & Accessibility

- Implemented GTM data layer architecture capturing page views, form submissions, CTA click events, and custom e-commerce events; integrated with Marketo for lead capture and nurturing workflows
- Ensured WCAG AA compliance across all projects: conducted Lighthouse audits, implemented 4.5:1 color contrast ratios, added focus indicators with visible outlines, built semantic HTML structure, and tested keyboard navigation flows

AI-Assisted Development & Documentation

- Built comprehensive Claude Code workflow system with 48+ custom skills, 8+ MCP integrations (ClickUp, GitHub, Figma, Playwright, Bitwarden), and Git safety hooks enabling parallel execution of complex tasks and 60% faster delivery
- Optimized 5,500+ client site images saving 181MB; implemented Perfmatters, LiteSpeed Cache, and Core Web Vitals tuning across 30+ production sites
- Resolved critical N+1 query performance bug using AI-assisted code analysis: reduced API calls from 100 to 1 per page load via global caching; documented solution with before/after profiler screenshots and query logs for team replication
- Created living documentation system: AI-generated code comments, automated changelog generation, and technical decision records (TDRs) for architectural choices

Product Development

- Developed Smart Time Tracker desktop application (Rust + React + Tauri): cross-platform time tracking with dual-signal activity detection (CPU + network I/O), ClickUp OAuth integration, and automated changelog generation across 24 releases; maintained 95%+ uptime

Jr. PHP Developer

May 2022 – Jan 2023

[Blaze Commerce](#)

- Developed custom WordPress plugins and themes with modern PHP standards (PSR-4 autoloading, namespaces, dependency injection)
- Optimized MySQL database queries, reducing page load times by 60% through index optimization and query refactoring
- Implemented Git version control workflows with feature branching, code reviews, and automated deployment pipelines

MIS Administrator

2018 – 2021

[Asia Pacific Express Corporation](#)

- Managed corporate websites, domain infrastructure, email servers (Exchange/SMTP), and cloud hosting environments (AWS, cPanel)
- Coordinated with vendors for DNS management, SSL certificate renewals, and server security patching
- Provided technical support for 200+ employees across multiple office locations

Systems Support / Junior Programmer

2017 – 2018

[People's Television Network, Inc.](#)

- Maintained news portal and corporate websites built on WordPress, implementing security updates and custom functionality
- Administered Windows Server Active Directory for 500+ user accounts, group policies, and network permissions
- Developed internal tools for content management and broadcast scheduling automation

CMS MIGRATION EXPERTISE

CONTENT MODEL MAPPING

- Craft Sections → Payload Collections
- Craft Matrix Fields → Payload Blocks API
- Entry relationships → relational fields with depth control

MIGRATION STRATEGY

- Dual-run architecture for zero downtime
- Automated content validation scripts
- Phased rollout with feature flags
- 301 redirect mapping for SEO preservation

FEATURED PROJECTS

Blaze Commerce Headless Library — github.com/lanz-2024

Next.js, React, TypeScript, WooCommerce REST API, Vercel

Open-source WooCommerce → Next.js bridge library with 90+ GitHub stars and TypeScript-first architecture. Powers 30+ production storefronts with Algolia search, GTM tracking, and WCAG AA compliance.

Smart Time Tracker

Rust, Tauri, React, TypeScript, ClickUp OAuth, GitHub Actions

Cross-platform desktop application for freelancers and contractors with dual-signal activity detection (CPU + network I/O), ClickUp OAuth integration, and automated changelog generation. 24 releases across Windows, macOS, and Linux.

Production Client Sites: Byron Bay Candles | Gourmet Basket | Porselli Dancewear

Next.js, WooCommerce headless, Algolia, GTM, WCAG AA

Headless storefronts with Algolia faceted search, GTM data layer event tracking, and full WCAG AA accessibility compliance across all devices and viewports.

EDUCATION

Bachelor of Science in Computer Science

AMA Computer College — 2013 – 2017
