

Alan Regaya

Happiness Engineer · WordPress & WooCommerce Specialist

nalayager@gmail.com · github.com/lanz-2024 · [linkedin.com/in/alan-regaya](https://www.linkedin.com/in/alan-regaya) · Quezon City, Philippines · Fully Remote-Ready

PROFESSIONAL SUMMARY

Senior WordPress and WooCommerce engineer with 5+ years building, debugging, and migrating 30+ production sites. Expert-level knowledge of WordPress internals, WooCommerce architecture, Jetpack, REST APIs, PHP, and the exact technical problems customers bring to live chat every day. Track record of going beyond daily tasks to create lasting improvements: a query optimisation that reduced database calls from 47 to 3, an AI automation system that cut delivery time by 40%, and an open-source WooCommerce library with 90+ GitHub stars powering 30+ live storefronts. Deeply motivated by the Automattic mission — democratising publishing and commerce for everyone.

TECHNICAL SKILLS

WordPress Expertise

WordPress Core & Hooks WP-CLI Block Editor (Gutenberg) REST API wp-config.php Debug Mode / Query Monitor Plugin Dev (PSR-4 PHP)

Jetpack & Automattic

Jetpack Modules WordPress.com Hosting Concepts Site Health Diagnostics Performance & Security Tools CDN & Image Optimisation

Performance & Server

MySQL Query Optimisation N+1 Query Elimination Server Log Analysis Cloudflare CDN & WAF Core Web Vitals LiteSpeed / Object Caching

WooCommerce

WooCommerce Architecture Cart & Checkout Flows Subscriptions & Multi-Currency WC REST API Headless WooCommerce GraphQL Schema Order & Product Hooks

Customer Support

Live Chat & Email Support 200+ Users Supported (MIS role) 500+ User AD Administration Technical Documentation Escalation Workflows Knowledge Base Writing

AI & Automation

Claude Code (48 custom skills) 8 MCP Integrations GitHub Actions CI/CD Playwright Automated Testing BackstopJS Visual Regression Automated Documentation

PROFESSIONAL EXPERIENCE

Senior Full-Stack Developer

Blaze Commerce · Remote

Feb 2023 – Present

- Primary technical contact for 30+ production WordPress/WooCommerce clients — first point of escalation for all hosting, plugin, theme, and performance issues via Slack and email; apply the same diagnostic precision to customer problems that I apply to production code.
- Diagnosed and resolved a critical **N+1 query bug** generating 47 database calls per page load — used Query Monitor and MySQL EXPLAIN to identify root cause, built a global PHP caching layer reducing queries to 3; documented with profiler screenshots for team replication. Result: 60% load time reduction, zero recurring complaints.
- Created the **BlazeCommerce WordPress Plugin** (v1.15.1, 2,042 commits): custom WP-CLI commands for bulk data sync, extended WooCommerce GraphQL schema, custom Gutenberg blocks with region-configurable global settings, and Typesense blue-green search deployment for zero-downtime index updates.
- Open-sourced a **headless WooCommerce** → **Next.js library** (90+ GitHub stars, 30+ production storefronts): TypeScript-first architecture with WooCommerce REST API, Cloudflare CDN, GTM data layer, and full WCAG AA accessibility compliance.
- Led **30+ zero-downtime CMS migrations** to Kinsta: automated content validation scripts, phased rollouts with feature flags, 301 redirect mapping for SEO continuity, and staging environment verification before every cutover.
- Built a **Claude Code automation system with 48 custom skills** and 8 MCP integrations — reduced delivery cycles by 40%, eliminated documentation debt with automated TDRs and CHANGELOG generation, and created reusable debugging workflows for the entire team.
- Ensured **WCAG AA compliance** across all projects: Lighthouse audits, 4.5:1 colour contrast, semantic HTML, keyboard navigation flows, ARIA labelling, and 7-breakpoint visual regression testing.
- Implemented **GTM data layer architecture** across multiple storefronts: page views, form submits, CTA clicks, and WooCommerce enhanced eCommerce events; integrated with Marketo for lead capture.

Jr. PHP Developer

May 2022 – Jan 2023

Blaze Commerce · Remote

- Built and maintained custom WordPress plugins and themes using modern PHP (PSR-4, namespaces, DI); implemented Git workflows with feature branching and GitHub Actions CI/CD.
- Optimised MySQL database queries reducing page load times by 60% through index analysis and query refactoring — foundational work later formalised into the BlazeCommerce plugin architecture.

MIS Administrator

2021 – 2022

Asia Pacific Express Corporation · On-site

- Provided technical support to **200+ employees** across multiple offices — helpdesk, email, and in-person — handling everything from DNS and SSL issues to WordPress site management and cloud hosting (AWS, cPanel).
- Managed domain infrastructure, SSL certificate renewals, Exchange/SMTP email servers, and vendor coordination for server security patching — direct experience with the hosting-level issues customers raise.

Systems Support / Junior Programmer

2016 – 2021

People's Television Network, Inc. · On-site

- Administered Windows Server Active Directory for **500+ user accounts**; maintained news portal and corporate WordPress sites, handling security updates, custom plugin development, and staff technical support.
- Developed internal PHP/MySQL tools for content management and broadcast scheduling automation; supported non-technical staff with patient, clear written and verbal communication under broadcast deadlines.

OPEN SOURCE & NOTABLE PROJECTS

BlazeCommerce Headless Library — github.com/lanz-2024 · Next.js · WooCommerce REST API · TypeScript

90+ GitHub stars · 30+ live storefronts · WooCommerce headless architecture with Cloudflare CDN, GTM tracking, and WCAG AA compliance.

BlazeCommerce WordPress Plugin — PHP · WooCommerce · Gutenberg · WP-CLI · GraphQL · Typesense

v1.15.1 · 2,042 commits · N+1 query fix · Custom WP-CLI commands · GraphQL schema extension · Blue-green search deployment.

Blaze Smart Time Tracker — Rust · Tauri · React · TypeScript · ClickUp OAuth · GitHub Actions

24 releases across Windows/macOS/Linux · Dual-signal activity detection · WordPress migration workflow tracker.

WHY AUTOMATTIC / HAPPINESS ENGINEERING

I have been building on Automattic's ecosystem — WordPress, WooCommerce, Jetpack — across every project I have shipped. Automattic's mission of democratising publishing and commerce is the reason the work I do matters. I am applying for the Happiness Engineer role because I believe world-class support is an engineering discipline: the same precision required to eliminate an N+1 query belongs in a customer chat window. I want to be where deep technical knowledge and genuine care for people compound — and where every solved problem becomes an asset that helps thousands of future customers.

EDUCATION

Bachelor of Science in Computer Science · AMA Computer College · 2013 – 2017
